Dear kevin ..director

CUSTOM LAPS STRATEGY FOR Windsor fu Kai jixie equipment

CUSTOM LAPS STRATEGY FOR Windsor fu Kai jixie equipment

SECTION 1: Your Dream Customer Transformation

Refined Dream Outcome (clear + specific)

“Contractors across Kenya (and East Africa) get reliable used heavy machinery fast, at a fair price, with verified condition—so they win tenders, finish projects on time, and protect cashflow.”

Your Dream Customer (who this is for)

- Small to mid-size contractors and subcontractors
- Quarry/earthworks companies
- Road works and building contractors
- Plant hire businesses that want to expand fleet
- Procurement managers for construction firms

The Transformation You Sell (before → after)

- Before: Machines keep breaking, downtime is common, spare parts are a guessing game, buying used is risky, and cash is tied up.
- After: They buy the right machine (and/or truck) with known condition, clear paperwork, and predictable maintenance—so projects stay profitable.

What they should feel after buying from you

- Safe: “I didn’t get conned.”
- Confident: “This machine will work on site.”
- In control: “I know total cost, timeline, and next steps.”
- Respected: “My boss/client sees me as a pro.”

Core promise (simple line you can use everywhere)

“Verified used heavy machinery for contractors—delivered with inspection, paperwork support, and after-sale parts guidance.”

SECTION 2: The Mega Mean Mouse

The Mega Mean Mouse (Core Problem)

Contractors need machines to deliver projects, but the used equipment market is full of hidden defects, unclear service history, and paperwork risk. One bad purchase causes downtime, penalties, and lost contracts.

What this problem costs them

- Site downtime (crew idle + fuel + rental replacements)
- Project delays → penalties and damaged reputation
- Cashflow stress (repairs + parts + transport surprises)
- Lost tenders because they can't show capacity

Likely “real” pains (even if they didn't state them on the form)

- Fear of buying an engine/transmission problem
- Fear of fake/unclear import and ownership documents
- Fear of overpaying for old stock
- Hard to compare options (brands, hours, condition)
- Transport logistics from yard to site

Common objections you must answer up front

- “How do I know it's not a bad machine?”
- “Can you prove hours/condition?”
- “What if I need parts after?”
- “Can you deliver upcountry / cross-border?”
- “Why is your price higher than someone on Facebook?”

SECTION 3: The LAPS System Design

A) Landing Page (Positioning + structure)

Landing Page Goal

Turn social and search traffic into booked inspections / calls (appointments), not “DMs that die”.

Landing Page Headline Options (pick 1)

- 1) “Buy Used Heavy Machinery Without Guesswork (Inspection + Paperwork Support Included)”
- 2) “Contractor-Grade Used Equipment—Verified Condition, Fair Pricing, Fast Delivery”
- 3) “Stop Losing Money on Downtime: Get Verified Used Machinery for Your Next Project”

Sub-headline (what makes you different)

“We help contractors choose the right machine, verify condition, and deliver quickly—so you finish projects on time.”

Key proof blocks you must include

- “Inspection & Verification” (what you check)
- “Stock List” (updated weekly: brand/model/year/hours/location)
- “Delivery & Logistics” (timeline + regions)
- “Paperwork Support” (ownership, import docs, transfer guidance)
- “After-Sale Support” (parts sourcing guidance + mechanic referral network)

Offer CTA (primary)

“Book a 15-minute Equipment Match Call”

Secondary CTA

“Request Current Stock + Prices (WhatsApp)”

What to include for trust (non-negotiable)

- Real yard photos + short walkaround videos
- Company details (location, registration number if available)
- A simple “How we verify machines” checklist
- Clear process: Step 1 call → Step 2 inspection → Step 3 deposit → Step 4 delivery

Landing Page sections (implementation-ready)

1. Hero: headline + 3 bullets + CTA
2. “Current High-Demand Machines” (cards)
3. “How Buying With Us Works” (4 steps)
4. “Inspection & Verification Checklist”
5. “Delivery Coverage Map” (Kenya + East Africa)
6. “Frequently Asked Questions”
7. Final CTA + WhatsApp click button

B) Qualification Questions (form + WhatsApp script)

Qualification goal

Filter serious buyers, collect project needs, and route them to the right next step (call, yard visit, or quote).

8 core questions (use on form)

- 1) What machine type do you need? (excavator / loader / grader / dozer / tipper / tractor head / other)
- 2) When do you need it on site? (0–7 days / 1–2 weeks / 3–4 weeks / just comparing)
- 3) Where is the project location? (town + county + country)
- 4) What is your budget range? (e.g., KES 2m–3m, 3m–5m, 5m–8m, 8m+)
- 5) Do you prefer specific brands/models? (Caterpillar, Komatsu, Volvo, XCMG, Howo, Isuzu, etc.)
- 6) Condition preference: (ready-to-work / minor service ok / refurb ok)
- 7) Will you pay cash or financing/terms? (cash / part payment / financing)
- 8) Decision maker status: (I decide / I recommend / company approval)

Qualification scoring (simple rule)

- Hot lead = needs in 0–14 days + budget identified + decision maker
- Warm lead = 3–4 weeks + budget rough
- Cold lead = “just browsing” + no budget

Routing

- Hot → book call within 24 hours + send 3 best options
- Warm → send stock list + 3-day follow-up
- Cold → add to weekly “New Stock Alert” broadcast

C) Presentation Flow (the “Sales Call / Yard Visit”)

Presentation objective

Move from “price shopping” to “risk reduction + certainty”.

Presentation format

- 15-min Equipment Match Call (phone/Zoom/WhatsApp)
- Then: Yard inspection appointment or video inspection

The LAPS presentation script (7 steps)

- 1) Context: “What project is this for and what deadline are you under?”
- 2) Stakes: “What happens if the machine fails or arrives late?”
- 3) Specs: “What capacity/output do you need daily?”
- 4) Options: show 2–3 machines only (not 10)
- 5) Verification: walk through your inspection checklist + video proof
- 6) Total cost: price + delivery + expected service + parts availability
- 7) Close: confirm next step (hold with deposit / schedule inspection / paperwork)

What you must show (assets)

- 60–120 sec walkaround video per machine
- “Inspection Checklist PDF”
- “Ownership & Transfer Checklist”
- “Delivery timeline estimate” by region

Closing lines that work in this market

- “If we verify it and you like it, do you want us to hold it for you so you don’t lose it?”
- “Would you prefer yard visit this week or a live video inspection today?”

D) Offer Structure (how you package it)

Your core offer

Used heavy machinery and trucks (constellation/tractor heads/tippers and construction equipment) matched to contractor needs.

Stack the offer with risk reducers (even if simple)

- 1) Equipment Match Call (free)
- 2) Verification pack (included):
 - Video walkaround
 - Basic checklist report (engine start, hydraulics, undercarriage, hours claim check)
 - Paperwork checklist guidance
- 3) Delivery coordination (quote + timeline)
- 4) After-sale support (30 days): parts sourcing guidance + mechanic referrals

Price framing

- If typical ticket is “5m” (KES 5,000,000), position as:
“A 5m machine with hidden faults can cost you 1m+ in repairs and weeks of downtime. Our process is built to prevent that.”

Simple guarantee (if you choose to offer one)

- “Verification Guarantee”: “If our inspection checklist misses a major obvious defect visible at inspection time, we refund the inspection fee / give service credit.”
(If you can’t support a guarantee yet, don’t promise it. Use strong verification proof instead.)

SECTION 4: Traffic Strategy (Google/Meta)

Goal

Generate consistent qualified leads (contractors) instead of random DMs.

A) Meta (Facebook/Instagram) – fast demand capture

Campaign 1: “Stock + Price” lead ads

- Objective: Leads/WhatsApp
- Offer: “Get this week’s stock list + prices + delivery timeline”
- Targeting:
 - Interests: construction, civil engineering, road works, quarry, plant operators
 - Behaviors: engaged shoppers
 - Lookalike from past buyers/engagers (when data exists)
- Creative: short walkaround videos + price range + location

Campaign 2: “Project deadline” ads

- Objective: Leads
- Message: “Need a machine on site in 7–14 days? We match and verify used equipment.”

B) Google Search – highest intent

Set up search campaigns for:

- “used excavator for sale Kenya”
- “used wheel loader price Kenya”
- “tipper truck for sale”
- “used grader for sale”
- “tractor head for sale”
- “heavy machinery dealers Kenya”

Google ad extensions (must use)

- Call extension (direct call)
- Location extension (if you have a yard)
- Sitelinks: Stock List, Book Inspection, Delivery Regions, How We Verify

C) Remarketing (non-negotiable)

- Everyone who visits landing page gets retargeted for 14 days with:
"New stock this week" and "Book inspection"

Recommended Ad Angles (minimum 3)

1) "Avoid downtime" angle

- Hook: "One bad machine can destroy your project timeline."
- Offer: verified used machinery + inspection proof.

2) "Verified condition" angle

- Hook: "Stop buying used equipment blind."
- Proof: walkaround videos + checklist + paperwork support.

3) "Fast delivery / project deadline" angle

- Hook: "Need equipment on site in 7–14 days?"
- Offer: matched options + delivery coordination.

4) (Bonus) "Cashflow smart" angle

- Hook: "Buy used, keep cash, still deliver the job."

SECTION 5: The 7-Touch Follow Up Sequence

Rule

Every lead gets 7 touches in 10–14 days. Mix WhatsApp + phone + SMS/email.

Touch 1 (0–5 minutes) – WhatsApp auto reply

Message:

"Hi Kevin, thanks for reaching out. Which machine do you need + your project location + budget range? I'll send 3 best options today."

Touch 2 (same day) – Call attempt + voicemail/WA

Message:

"I can match the right unit fast. When do you need it on site and who signs off the purchase?"

Touch 3 (Day 1) – Send 3 options (video + bullets)

Format:

- Option A: price, year, hours, location, 1 risk note, delivery estimate
- Option B

- Option C

End with:

“Do you want a yard visit or live video inspection today?”

Touch 4 (Day 3) – Risk reversal follow-up

Message:

“Most buyers lose money on hidden faults/paperwork issues. Want me to share our verification checklist so you can compare safely?”

Touch 5 (Day 5) – Social proof / credibility

Message:

“We supply contractors who need reliable machines for deadlines. If you tell me your timeline, I’ll reserve the closest match before it’s taken.”

(As you collect testimonials, add 1 short quote + project type.)

Touch 6 (Day 7) – Offer to hold / scarcity (ethical)

Message:

“This unit is still available today. If it fits your specs, we can hold it with a small deposit while you complete approval. Want to proceed?”

Touch 7 (Day 10–14) – Breakup + reactivation

Message:

“Should I close your request for now, or are you still buying this month? If you tell me the month, I’ll only send stock that matches.”

Weekly nurture (ongoing)

- “New Stock Alert” broadcast (WhatsApp list) once per week
- 1–2 short videos: machine walkarounds + tips (“how to check undercarriage”, “hours vs condition”) to build authority

SECTION 6: Implementation Blueprint (Step-by-step)

Week 1: Foundation

- 1) Define top 10 machines you want to sell most (based on demand)
- 2) Create a “Stock Sheet” template (Google Sheet)
- 3) Create inspection checklist (1 page)
- 4) Create landing page (one page) + WhatsApp CTA + booking calendar

Week 2: Qualification + CRM

- 5) Build qualification form (8 questions)
- 6) Connect form → CRM (Systeme.io or similar)
- 7) Set tags: Hot/Warm/Cold + Machine Type tags
- 8) Set automated replies (WhatsApp + email)

Week 3: Assets + Presentation

- 9) Create video template (walkaround structure)

10) Create 15-min call script + quote template

11) Create paperwork checklist PDF

Week 4: Traffic launch

12) Launch Meta lead ads (2 campaigns)

13) Launch Google search ads (high intent)

14) Install pixels + remarketing audiences

Week 5+: Optimize

15) Track 5 numbers weekly:

- leads
- % qualified
- appointments booked
- show-up rate
- sales closed

16) Scale best-performing machine categories and regions

Funnel Flow (step-by-step)

- 1) Ad (Meta/Google) →
- 2) Landing Page (stock + verification promise) →
- 3) Qualification Form (8 questions) →
- 4) Thank-you page (book call) + WhatsApp open →
- 5) 15-min Equipment Match Call →
- 6) Inspection (yard or live video) →
- 7) Deposit/hold + paperwork steps →
- 8) Delivery →
- 9) After-sale support + referral request

SECTION 7: Why Fanisi Should Implement This For You

You can implement this alone, but here is the truth:

- The strategy is simple. The hard part is building the full system fast, correctly, and tracking it weekly.

If you implement alone, the common risks are:

- Ads run but leads are low quality (no qualification)
- Too many DMs and no structure (slow follow-up)
- No presentation assets (buyers keep price shopping)
- No retargeting (you pay for the same lead again)

When Fanisi implements, you get:

- A complete landing page + form + tracking + CRM tags
- Ready follow-up automations (7-touch) so leads don't go cold
- Ad creatives + copy based on your exact stock categories
- A presentation kit (scripts + checklists + templates)
- Weekly optimization using the LAPS scorecard

This means:

- Faster lead flow
- More booked inspections
- Higher close rate
- Less time wasted on unserious buyers

LAPS Diagnostic Report:

Lead Score: 4/10

Appointment Score: 3/10

Presentation Score: 3/10

Offer Score: 5/10

Follow-up Score: 2/10

Overall LAPS Score: 3.5 / 10

Classification: Critical Condition

Meaning

You have demand in the market, but the current system depends too much on social DMs and manual follow-up. Without a landing page, qualification, presentation assets, and a 7-touch rhythm, most leads leak out before becoming appointments and sales. Fixing this will unlock predictable sales growth.
